Per-segment kurtosis gain under three ways of combining segments (synthetic, Gaussian noise, rev2 signal model)
ξ = 0.01
ξ = 0.001
ξ = 0.0001
log10 σ_s² at 50 % detection (lower is better)
CC, stacked (LVK)
Trad (C,P), stacked
ING (C,P,κ), stacked
Trad, product of likelihoods
ING, product of likelihoods
Drasco–Flanagan, full data
gain Δ over power-only baseline [dex]
ING − Trad, stacked (memo Sec. 4)
ING − Trad, product of likelihoods (option b)
Drasco–Flanagan − Trad stacked (comment 10)
stacked duration [h] (4 s × N)
