Option (b): trained ING-Net and power-only posteriors combined over N segments of real evaluation noise
ξ = 0.001
ξ = 0.01
product posterior: calibration (real noise)
Δ = Trad − ING-Net [dex] (positive: ING-Net deeper)
stacked duration [s]
stacked duration [s]
empirical coverage (median over runs)
N segments combined
1 min
1 h
1 d
ING: coverage of 50 % CI
ING: coverage of 90 % CI
Trad: coverage of 50 % CI
Trad: coverage of 90 % CI
synthetic: linear stack
synthetic: product of likelihoods
synthetic: Drasco–Flanagan vs Trad
trained nets, product of posteriors, real noise (15 stretches)
trained nets, product of posteriors, synthetic noise (3 stretches; statistic saturated)
trained nets, linear stack, real noise (15 stretches)
trained nets, linear stack, synthetic noise (3 stretches)
